Thank you for your interest in our products.

Jagua, is a common name of the *Genipa Americana L.* fruit tree. It is a species of Genipa, native to northern South America (south to Peru), the Caribbean and Central America. The juice of the immature fruit is used by rain forest natives as a body-painting color. Oxidization induces a natural reaction on skin resulting in a nice black/dark blue temporary tattoo. It takes approximately one hour to dry, wait two hours and wash the gel/paint off with water. The temporary tattoo will start to develop within two hours, reach its final color in twenty-four hours and will last eight to fifteen days.

Empty Jar

.5 ounce jar (15ml) **\$3.00**

Jagua Tattoo Gel

Ideal to achieve a dark color with one coat. Delicate line work may be achieved by dispensing the required amount of gel for the tattoo into an application cone or bottle with a fine tip. Our bottles have a twist-top cap.

1 ounce bottle (30ml) **\$46.00**
4 ounce bottle (120ml) **\$174.80**

Jagua Tattoo Paint

Suitable if a fast drying time is required. Shades of gray and black are obtained through an application of thin layers. Apply with a paint brush directly from this sturdy and resealable jar.

.5 ounce jar (15ml) **\$24.00**
1 ounce bottle (30ml) **\$46.00**
4 ounce bottle (120ml) **\$174.80**

Jagua Tattoo Gel Tube

Perfect for getting started and creating a one coat tattoo. Cut or pierce the nozzle depending on the size of line required, easy product flow and ideal application control. Replace cap after use. Use within seven days for best results.

5ml tube **\$8.00**
